Profile

I'm a front-end oriented Web Designer and Da Vinci School graduate (2010) who has worked for various high traffic websites, most notably MercadoLibre and DeAutos, where I gained significant first-hand experience in UI/UX development, with equal emphasis on performance and code semantics.

Since 2010, I have worked as a freelancer, developping sites and applications web meeting tight, high-pressure deadlines while ensuring consistent operation.

I am also employed of R/GA Buenos Aires in where we work in contact with offices of differents countries developing web-apps for multiple brands.

My passion for technology extends far beyond the day-to-day demands of my work: I keep a constant eye on emerging trends in the field, so that I'm always updated on the latest advances, with the goal of ensuring that the quality and scope of my work are always expanding.

Skills

Semantic HTML 5	UX / UI Development	PHP
